

Installation by independent retailer: Innovation Blinds

An exclusive range of premium patio awnings

ENHANCE, PROTECT AND PROLONG THE USE OF YOUR TERRACE

Practical & stylish like a roof outstretching, our patio awnings extend to provide the ultimate alfresco living space. Offering protection from the sun's intense heat, our patio awnings keep you cool on even the hottest of summer days whilst offering shelter from those unexpected and often persistent rain showers*. Damaging ultraviolet rays are blocked providing optimum protection to the skin whilst harsh light is filtered to stop unwanted glare.

Add an eye catching and striking new dimension to the façade, that allows you to entertain in style and sophistication, come shower or shine.

Stopping the sun's heat rays even reaching the glass, our patio awnings prevent unwanted solar heat gain and bright light, naturally cooling the indoor space and eliminating glare, along with protecting furnishings from bleaching by the sun, whilst still maintaining a clear view out.

*Rain shower use subject to pitch of 14 degrees or greater as set out in European Directive EN13561 to ensure effective rain run off.

NEXT GENERATION FABRICS

Our patio awnings exclusively feature 'Lumera' fabrics - a premium material that, along with offering outstanding sun protection, is water repellent, dirt repellent and easy to clean.

Lumera fabric is woven with a specially developed CBA-yarn. The acronym CBA stands for "Clean Brilliant Acrylic" and summarises the advantages of this totally unique patio awning fabric. Compared to conventional materials, the CBA yarn is completely smooth and produces a woven fabric with an extremely dense surface which ultimately prevents dirt from adhering. As a result, colours shine longer and more intensely.

acrylic fibre

Moreover the fabric is extremely water repellent generating a self-cleaning effect which significantly extends the life of the material.

An independent study confirms the outstanding properties of Lumera fabrics; upto 50% less dirt adheres to Lumera in comparison to traditional patio awning fabrics.

Designed, engineered and built to last

Using extruded aluminium for the framework, which is both corrosion resistant and highly durable, along with drop forging/pressure die casting for the joints and stainless steel components to hold everything together, our patio awnings are **strong and resilient**, some would say over engineered, we simply say built to last.

Fabrics are woven using the finest solution dyed colourfast fibres, designed to last a lifetime (*see left*). Motorised operation (*optional, recommended*) via a wirefree transmitter allows you to **effortlessly extend and retract** our patio awnings, while the addition of ambient sensors including light and wind detectors, automatically position our patio awnings dependent on the climatic conditions.

BAHAMAS

THE ORIGINAL, UNIVERSAL MULTI-FIX FULL CASSETTE AWNING

Width: 2.05m - 7.00m
